# SOLVENT & ECO FLEX BANNER

Flex Banner, also called canvas, is a type of PVC material that contains organic compound mixtures. Because it is extremely durable and lightweight, it is very convenient to be able to print on it.

We are engaged in offering high quality banner that are manufactured using premium grade raw material source from reliable vendors. We prepare Flex Banners for all the special occasions as. These are as shown below:

## All kind of Functions

On Festivals

For Security Boards

Company Advertisement Banners

Notice Banners

# SOLVENT & ECO VINYL PRINTING

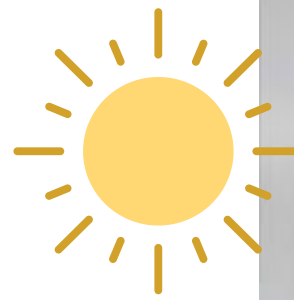

Vinyl banners are a form of outdoor advertising. Most banners are now digitally printed on large format inkjet printers which are capable of printing a full color outdoor billboard on a single piece of material.

Vinyl banners have many uses and applications. They are most often used to promote a company's logo, a special promotion, event, team or school. Since vinyl is a very flexible as well as portable material you can see vinyl banners just about anywhere. Vinyl banners are commonly seen as billboards, table banners, trade show banners, building banners, street banners as well as stadium.

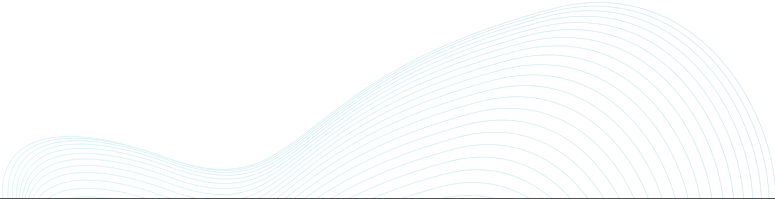

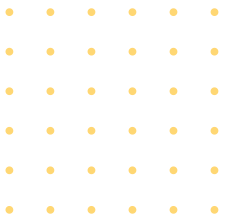

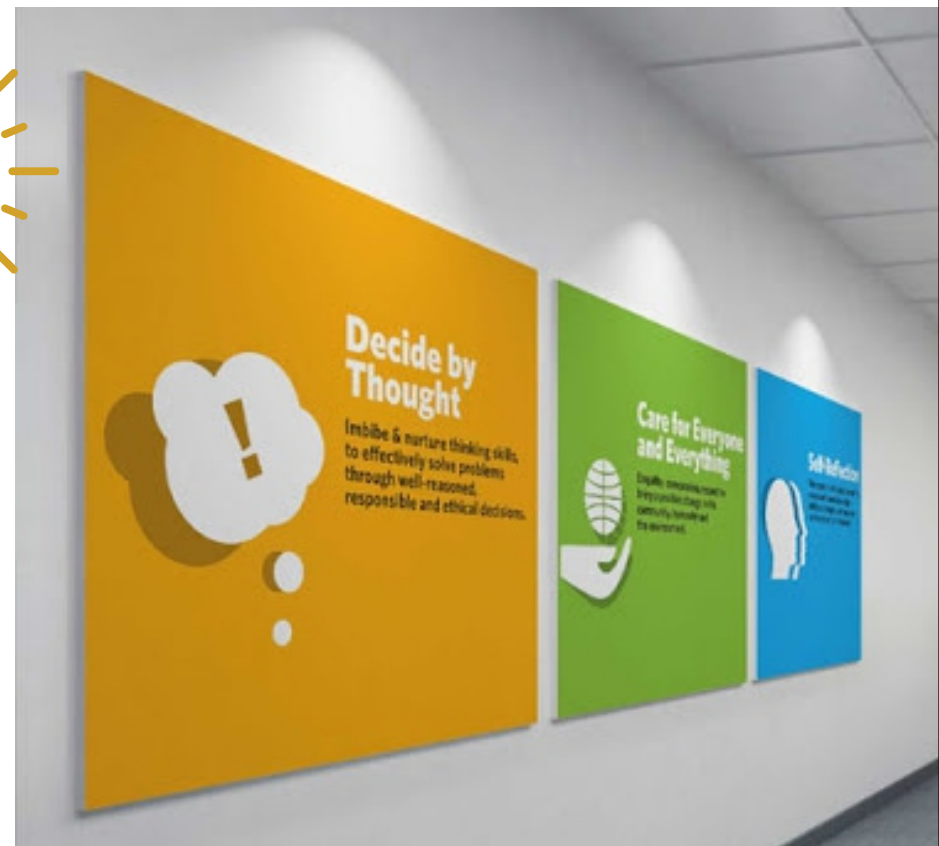

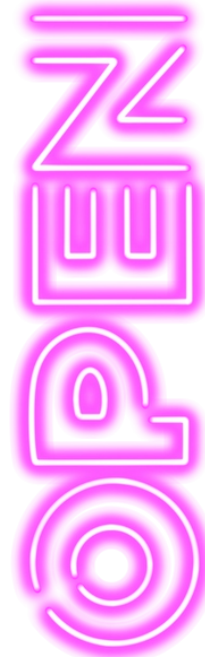

# SUN BOARD

SunBoard sheets are also used in the advertising industry on account of their excellent printability for advertising signs, POP displays and hoardings

# BACKLIT GLOW SIGN BOARD

We are largest manufacturer of glow sign boards of various sizes at very best and affordable rates. Our Sign Boards manufactured by us find usage for a varied gamut of applications. We combine the use of appropriate color combinations to maximize the scenic value of the signs

## ONE WAY VISION

We are also engaged in Servicing an Extensive range of One-way vision printing with the help of our expert and highly skilled designers.

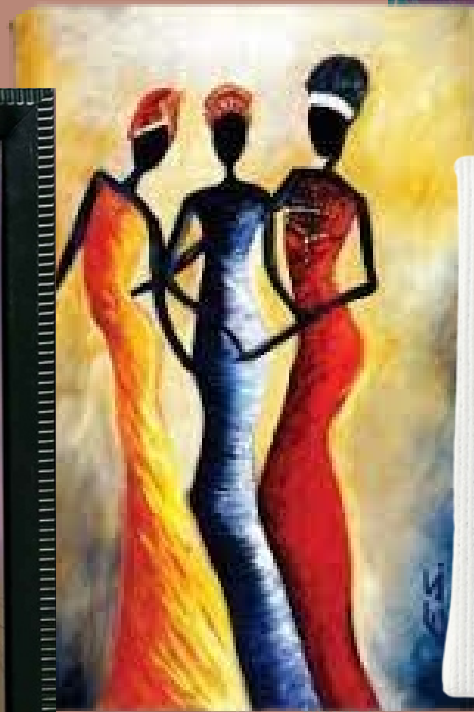

This one way vision printing solution is ideal for promoting and marketing the products, brands, company, events, updated product specifications, etc..These Print use in glass for Office, Malls, Showroom, Bank, Bank ATM etc. This is the digital print in high impact printing material

# CANVAS PRINTING

A canvas print is the result of an image printed onto canvas which is stretched, or gallery-wrapped, onto a frame and displayed. Canvas prints are often used in interior design, with stock images, or customized with personal photographs. Canvas prints are intended to reproduce the look of original oil or acrylic paintings on stretched canvas?

# PROMOTIONAL CANOPY

A canopy (or portable gazebo or frame tent in some countries) is a shelter that collapses down to a size that is portable. Typically, canopies of this type come in sizes from five feet by five feet to ten feet by twenty feet. Larger or semi-permanent canopies are known as “marquees”. Most pop-up canopies come in two pieces, the canopy frame and the canopy top. The canopy frame is constructed of either steel or aluminium. Steel framed canopies are heavier and typically cost less than aluminium frames. Recently, stainless steel has been used because it is lighter than steel and stronger than aluminium. Banking on our enriched industry experience, we are able to offer a wide gamut of Promotional Canopies. We design and fabricate this high grade quality Promotional Canopies by employing finest grade basic materials

## ROLL UP STANDEE

Banner Stands are an attractive and convenient way to showcase products and messages to a target audience. They are usually portable and flexible structures and carry attractiv graphics. One of the popular types is the retractable banner stand. Easy to use, they work like a window blind- simply slide up the graphic over a pole and secure it. They are also called roll up banners

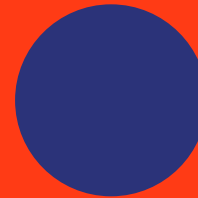

# Industrial Safety Boards

# SAFETY

## SIGN BOARDS

---

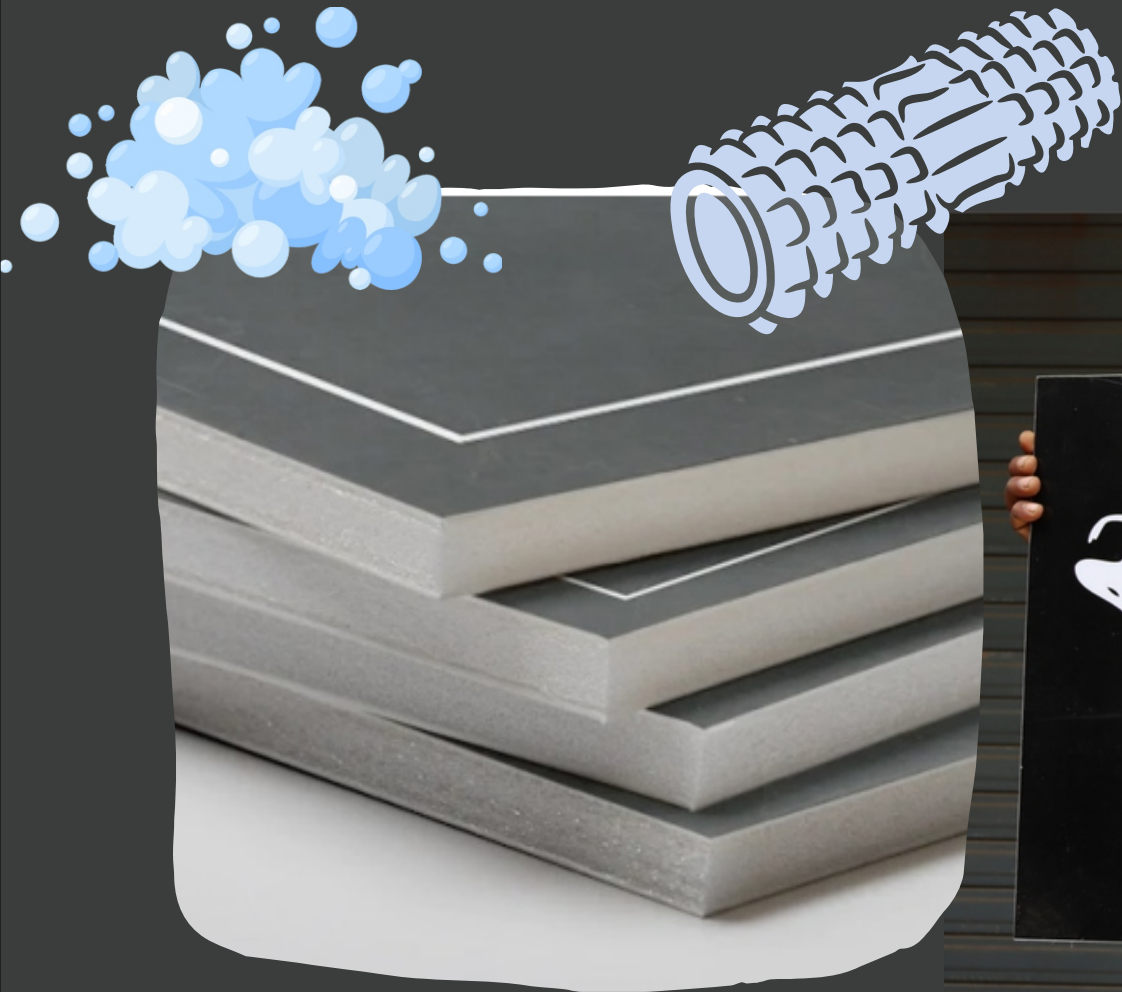

# Foam Board

PVC foam board plastic material of 3mm and 5mm thickness

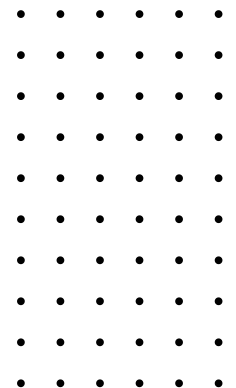

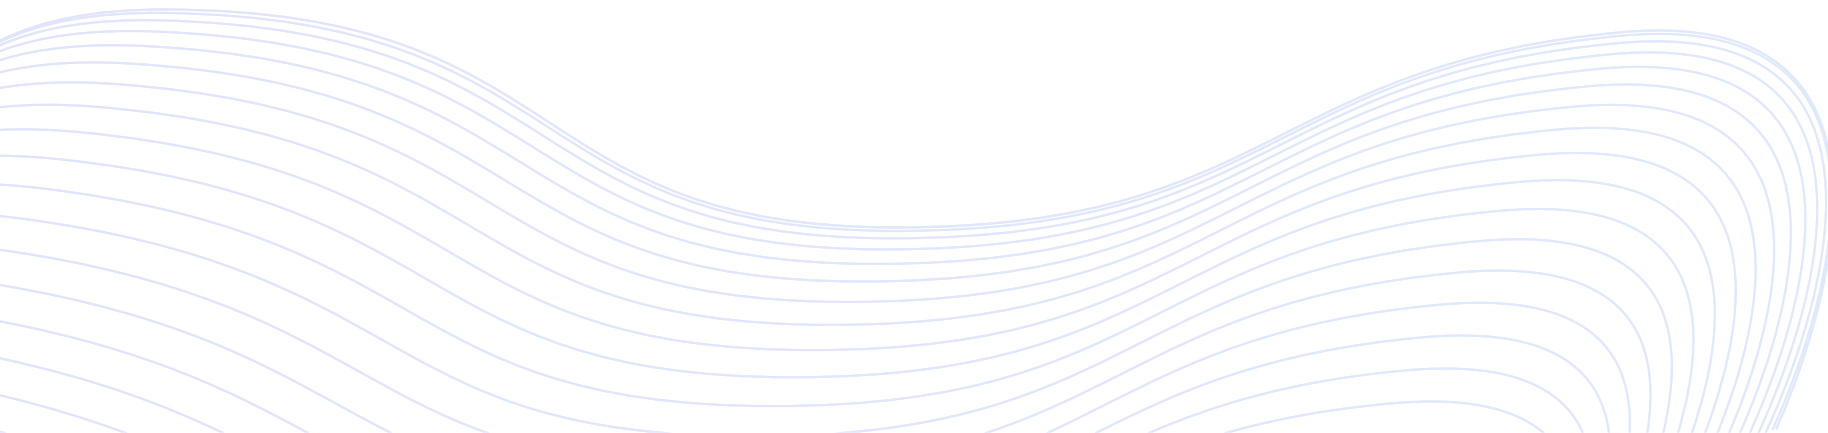

Thick and durable, but extremely light

High-quality matte finish, with vibrant colours

You can use board forms to create foundation walls, retaining walls, interior walls, chimneys, and anything else that's made with poured concrete. The thickness a structural poured formed concrete is the same as using traditional forms. The only difference is the appearance. But the forms are much harder to build and take a lot longer.

# ACP BOARDS (SIGNS)

ACP ( Aluminium Composite Panel ) an alloy of aluminium and rubber is used largely for manufacture of signage of all types. Be it interiors or exteriors, large format or small, ACP serves as the first choice among users.

Durable by nature, ACP bases as thin as 3mm, 4mm and 5mm also are strong and rigid, making them favourable to be used in different sizes, patterns and colours. Lighting of any kind can be comfortably used with ACP signs. We use premium quality ACP material for all our signs.

Printing to Aluminium Composite (ACP) is now often the standard for the high quality direct to media printing for signage and artwork. Producing long lasting prints that are perfect for outdoor use.

# CNC Works

# UV PRINTING

UV printing is a unique method of digital printing utilising ultraviolet (UV) light to dry or cure ink, adhesives or coatings almost as soon as it's hit the paper, or aluminum, foam board or acrylic - in fact, as long as it fits in the printer, the technique can be used to print on almost anything.

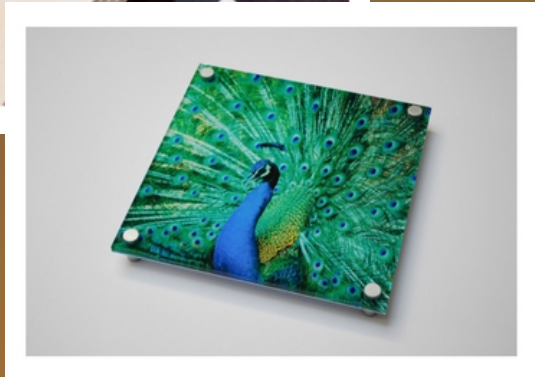

## Benefits of Uv Printing

- Increased efficiency.
- Time saving.
- Faster output.
- Improved turn-around time due to how the UV printer cures the ink.
- Increased durability: the UV cured ink is much more resistant to damage such as scuffs and marks.
- Increased vibrancy: the colors of the UV cured inks are much sharper than the colors that are printed using traditional printing methods.
- No waiting for hours on end for the ink to dry or cure.
- More consistent, higher quality results thanks to the UV coating and UV inks.
- Increased flexibility, as UV printers can print on virtually any material thanks to the UV lights.
